Novel coronavirus (COVID-19)

The COVID-19 novel coronavirus is a new strain of coronavirus affecting humans.

Some coronaviruses can cause illness similar to the common cold and others can cause more serious diseases such as Severe Acute Respiratory Syndrome (SARS) and Middle East Respiratory Syndrome (MERS).

This novel coronavirus is still new and as such we are still learning more about it.

Signs and Symptoms:

Symptoms reported in identified cases of COVID-19 novel coronavirus include:

- Fever
- Cough
- Sore throat
- Shortness of breath
- Runny nose
- Fatigue
- Loss of smell and/or taste

People may also experience other symptoms that are different to what is shown above, such as headache, nausea or vomiting, muscle pain, joint pain, diarrhoea or a loss of appetite. Symptoms can vary depending on each case.

If you have a sudden onset of any COVID-19 symptoms, you should contact your local doctor or call 13HEALTH (13 43 25 84).

People with suspected COVID-19 will be tested.

Read about novel coronavirus (COVID-19) symptoms compared to cold or flu.

Who is most at risk

Based on what we know about coronaviruses, those most at risk of serious infection are:

- people with compromised immune systems (such as people who have cancer)
- elderly people
- Aboriginal and Torres Strait Islander peoples (as they have higher rates of chronic illness)
- people with chronic medical conditions
- people in group residential settings

Treatment:

There is no specific treatment for COVID-19 infection. Antibiotics are not effective against viral infections. However, most of the symptoms can be treated with medical care.

There is currently no vaccine for COVID-19 novel coronavirus.
